## Dedication

*Cancer in Alaska Native People: 1969-2013, The 45 Year Report* is dedicated to Anne P. Lanier, MD, MPH, and her tireless work on behalf of the Alaska Native people. Dr. Lanier established the Alaska Native Tumor Registry in 1974 in collaboration with the National Cancer Institute and the Centers for Disease Control and Prevention. Dr. Lanier has been a leader in cancer epidemiology for over forty years. In that time Dr. Lanier has contributed over 200 peer-reviewed publications to the scientific literature, produced numerous reports, and delivered a variety of presentations. Her work has added greatly to our current understanding of cancer among Alaska Native people, as well as led to numerous grants for programs, including the Alaska Native Tribal Health Consortium's (ANTHC) Education and Research Towards Health (EARTH) study, the ANTHC Cancer Program, and the ANTHC Tobacco Program. Dr. Lanier continues to be a champion for reducing the burden of cancer and promoting health among Alaska Native people.

Dr. Lanier, we are honored to dedicate this report to you.

## Acknowledgements

The authors wish to express thanks to the many tumor registrars, medical records personnel and IT staff at health care facilities, and others throughout the state who helped assure the completeness and accuracy of these data. We could not have produced this report without the continued support from staff of the Alaska Native Medical Center Tumor Registry, the Alaska Cancer Registry, the New Mexico Tumor Registry, and the Washington State Cancer Registry.

Funding for the SEER Alaska Native Tumor Registry is provided through a subcontract with the Regents of the University of New Mexico as part of the National Cancer Institute/Surveillance, Epidemiology and End Results (SEER) contract HHSN261201300010I.

## **Errata**

### Corrected 17 January, 2017

Previously, colorectal cancer was erroneously omitted as the second leading cancer, by frequency, among Alaska Native Women in the Interior Tribal Health Region from 1984 through 2013 (pg. 91, column 3, row 2). That omission has been corrected and the leading cancers have been renumbered accordingly.

### Corrected 17 February, 2017

Previously, the colorectal cancer counts for Alaska Native women from 1999 through 2013 were incorrectly displayed as the total counts for both Alaska Native women and men combined (pg. 37, fifth column of table; Women -> Alaska Native -> Count). That error has been corrected. No other values in the table were affected by the change.

## **Introduction**

This report provides detailed information on cancer incidence and mortality over the 45-year period 1969-2013 from the Alaska Native Tribal Health Consortium's (ANTHC) Alaska Native Tumor Registry. Cancer remains the leading cause of death among Alaska Native (AN) people with an average of 177 AN cancer deaths and over 400 new cases of cancer diagnosed per year (2009-2013).

Cancer incidence and mortality data for the US white (USW) population is included to provide a population for comparing cancer rates. Comparisons with other groups help to describe similarities and differences and may show areas for improvement. These data can also be used for health status monitoring, strategic planning, and evaluation in order to decrease cancer incidence and mortality.

## **Methods**

AN population estimates were gathered from the US Census (1970, 1980, and 1990) and from National Center for Health Statistics' bridged population series for AN people (1981–2010) from the SEER\*Stat website (1). Population estimates, cancer incidence, and cancer mortality data for USWs were obtained from the National Cancer Institute's SEER Program SEER\*Stat database (2).

Cancer incidence data among AN people are from the Surveillance, Epidemiology, and End Results (SEER) Alaska Native Tumor Registry, a population-based registry that collects data about AN people who lived in Alaska at the time of their cancer diagnosis and who met eligibility requirements for Indian Health Service (IHS) benefits (3). Cancer incidence rates were expressed as average annual rates per 100,000 population for selected time periods between 1969-2013. USW cancer incidence data for both 1999-2013 and 2009-2013 were obtained from a SEER\*Stat data set which was based on 18 registries (4,5). USW trend data for 1974–2013 were obtained from a SEER\*Stat data set based on 9 registries (6). Current AN and USW mortality rates were based on data for the years 2007-2011 and mortality trends were based on data for the years 1992-2011. These mortality rates were obtained from SEER\*Stat (7).

Cancer data and demographic information for AN patients are collected from medical records including pathology reports, provider dictations, and discharge summaries from the Alaska Native Medical Center in Anchorage, AK, as well as other Alaska regional medical facilities. All medical record abstracting was completed using detailed coding and staging guidelines established by the SEER program(8).

Primary cancer site, pathology, behavior, and grade coding followed the International Classification of Diseases for Oncology, 2<sup>nd</sup> and 3<sup>rd</sup> editions (9,10). Cancer sites of origin were grouped according to SEER primary site groups. Less than 1% of the cases were identified from death certificates alone; 90% of cancers were confirmed histologically by pathology examination. Data were processed through a standard set of computerized edits. SEER data quality was also monitored through periodic record review and other SEER data quality improvement activities.

Calculation of rates, rate ratios (RRs), and 95% confidence intervals were computed using SEER\*Stat statistical software version 8.1.5 (2). Rates for AN people were age-adjusted to the US Census 2000 standard population using the direct method for comparison with USW rates. Rate ratios are expressed as the AN rate divided by the USW rate. Cancer incidence rates for each tribal health region within Alaska were compared with the average annual cancer incidence rates for all AN statewide.

## **Executive Summary**

### ***Leading Cancers Among Alaska Native People***

For the years 2009-2013, a total of 2,123 cases of invasive cancer were diagnosed compared to 1,866 from the prior five year period, 2004-2008. From 2009-2013, the most frequently diagnosed invasive cancers among AN men and women combined were: colorectal cancer (368 cases, 17.3% of all cancers), female breast cancer (328 cases, 15.4% of all cancers), lung cancer (324 cases, 15.3% of all cancers), and prostate cancer (109 cases, 5.1% of all cancers). These four leading cancers accounted for 53.2% of all invasive cancer diagnoses.

### ***Incidence Rates Comparison: Alaska Native (AN) vs US White (USW)***

For the years 2009-2013, rates among AN people exceeded those among USWs for nasopharyngeal (RR=17.25), stomach (RR=3.21), colorectal (RR=2.21), kidney (RR=1.47), lung (RR=1.46), and liver cancer (RR=1.45). Although cancer of the nasopharynx is diagnosed relatively infrequently (27 diagnoses from 2009-2013), the rate ratio is exceptionally high at 17.25. In contrast, AN rates were lower than USWs for the following cancers: melanoma (RR=0.22), lymphocytic leukemia (RR=0.32), prostate (RR=0.45), urinary bladder (RR=0.58), and non-Hodgkin lymphoma (RR=0.71). During these years, the average annual age-adjusted cancer incidence rate among AN women for all sites combined was 23.3% higher than among USW women while the rate for all sites combined among AN men was similar to that of USW men.

### ***Trends in Cancer Incidence***

Colorectal cancer (CRC): Since the mid-1980's, USW CRC incidence rates have declined significantly, while AN CRC incidence rates have been relatively stable. During this same time period, AN CRC incidence rates have remained significantly higher than those among USWs.

Breast cancer: From the 1970s to mid-1990s, breast cancer incidence rates increased dramatically. However, since the mid-1990s there appears to have been no significant change in these rates. While AN breast cancer incidence rates were once much lower than USWs, breast cancer incidence rates are now similar to those among USW women.

Lung cancer: Since the 1970s, lung cancer incidence rates appear to have increased among AN people and these rates have remained consistently higher than USW rates since the early 1980s.

Prostate cancer: In contrast to the other leading cancers, prostate cancer incidence among AN males has remained relatively stable since the early 1970s and consistently lower than USW males.

### ***Age-Specific Rates***

Age-specific incidence rates were calculated for the 15-year period, 1999-2013. During this time period, nearly 70% of AN cancer diagnoses were among people 50-79 years of age. For all cancer sites combined, AN people age 40-49, 50-59, and 70-79 had significantly higher incidence rates than the corresponding age groups among USWs. Colorectal, stomach, and nasopharyngeal cancer rates were significantly higher among all AN people age 30 and above; lung cancer rates were significantly higher for age 40 and above; gallbladder cancer rates were significantly higher for age 50 and above; and kidney cancer rates were significantly higher for age 50-79. USW men had significantly higher prostate cancer rates than among AN people age 40 and above; significantly higher urinary bladder cancer rates for age 50 and above; and significantly higher leukemia rates for age 60 and above.

### ***Tribal Health Region***

For the purposes of this report, the AN population is distributed over 12 tribal health regions (refer to the map and Tribal Health Regions table provided). Each region was compared to the AN statewide average annual incidence rate for the years 2004-2013. For all sites combined, no tribal health region was significantly higher than the AN statewide average rate; however, the Yukon-Kuskokwim region had a significantly lower rate than the AN statewide average rate (RR=0.80).

Colorectal cancer: Compared with the AN statewide average rate, colorectal cancer incidence rates were higher in the Arctic Slope region (RR=1.94) and lower in the Southeast region (RR=0.71).

Breast cancer: Compared with the AN statewide average rate, breast cancer incidence rates were higher in the Southeast region (RR=1.44) and the Interior region (RR=1.41) and lower in the Yukon-Kuskokwim region (RR=0.51) and the Northwest Arctic region (RR=0.53).

Lung cancer: Regional lung cancer incidence rates were not significantly different than the AN statewide average rate.

Prostate cancer: Compared with the AN statewide average rate, prostate cancer incidence rates were higher in the Kodiak region (RR=2.64) and in the Southeast region (RR=1.53).

### ***Mortality Rates***

Between 1992-2011, a total of 2,784 AN deaths due to cancer were reported. Mortality rates among AN people exceeded those of USWs for all sites combined (RR=1.30) and for selected sites: nasopharyngeal (RR=21.00), stomach (RR=3.66), kidney (RR=2.24), colorectal (RR=1.86), liver (RR=1.77), esophageal (RR=1.67), lung (RR=1.34), and pancreatic (RR=1.29) cancer. Mortality rates among AN people were lower than USW mortality rates for melanoma of the skin (RR=0.26), brain & nervous system (RR=0.33),

non-Hodgkin lymphoma (RR=0.56), urinary bladder (RR=0.62), myeloid & monocytic leukemia (RR=0.63), and prostate cancer (RR=0.68).

For the time period 2007-2011, statewide AN mortality rates for stomach cancer (R=3.87), kidney cancer (RR=2.38), colorectal cancer (RR=2.28), lung cancer (RR=1.51), and all sites combined (RR=1.42) were higher than USW rates. Breast cancer mortality rates for AN women and USW women were similar (28.3 vs 21.7 per 100,000, respectively) as were prostate cancer mortality rates for AN men and USW men (16.1 vs 20.6 per 100,000, respectively).

## Cancer Rates Among Alaskan Native People *Higher* than US White

## Cancer Rates Among Alaskan Native People *Lower* than US White

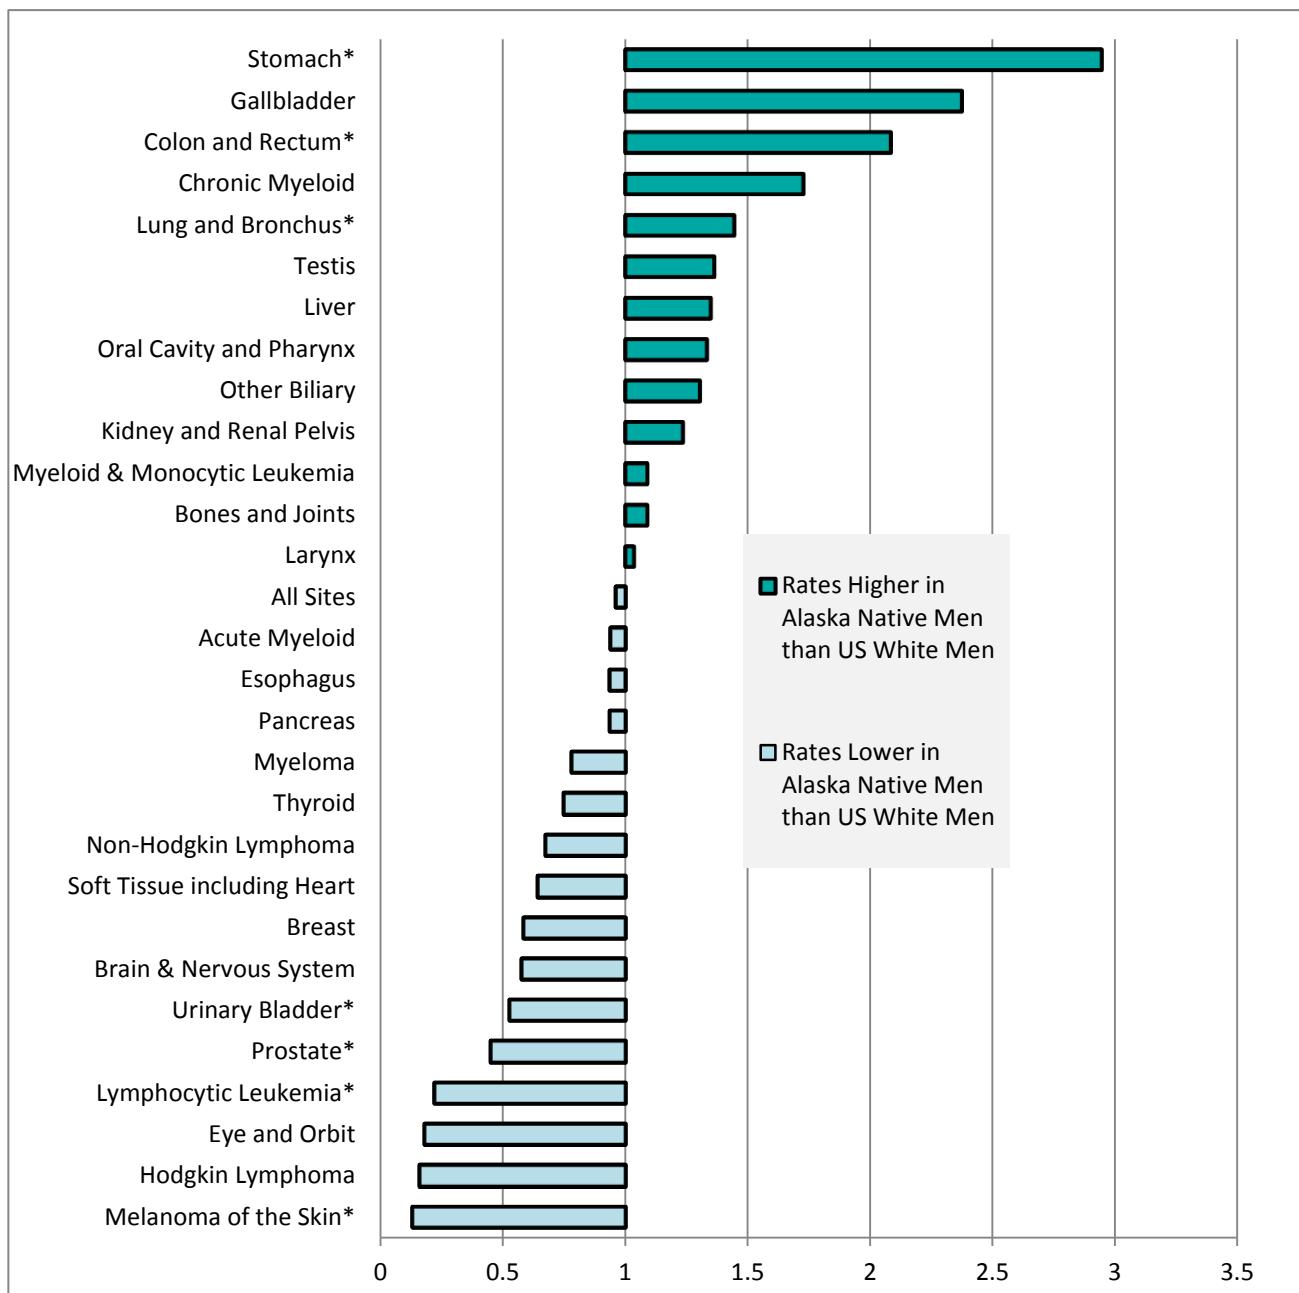

**Age-Adjusted Rate Ratios**  
**Alaska Native Men and Women : US White Men and Women**  
**2009-2013**

\* Rates among Alaska Native people are statistically different from US White rates;  $p < 0.05$ .

Rate ratio for nasopharynx = 17.25\* not shown, but included in oral cavity/pharynx group.

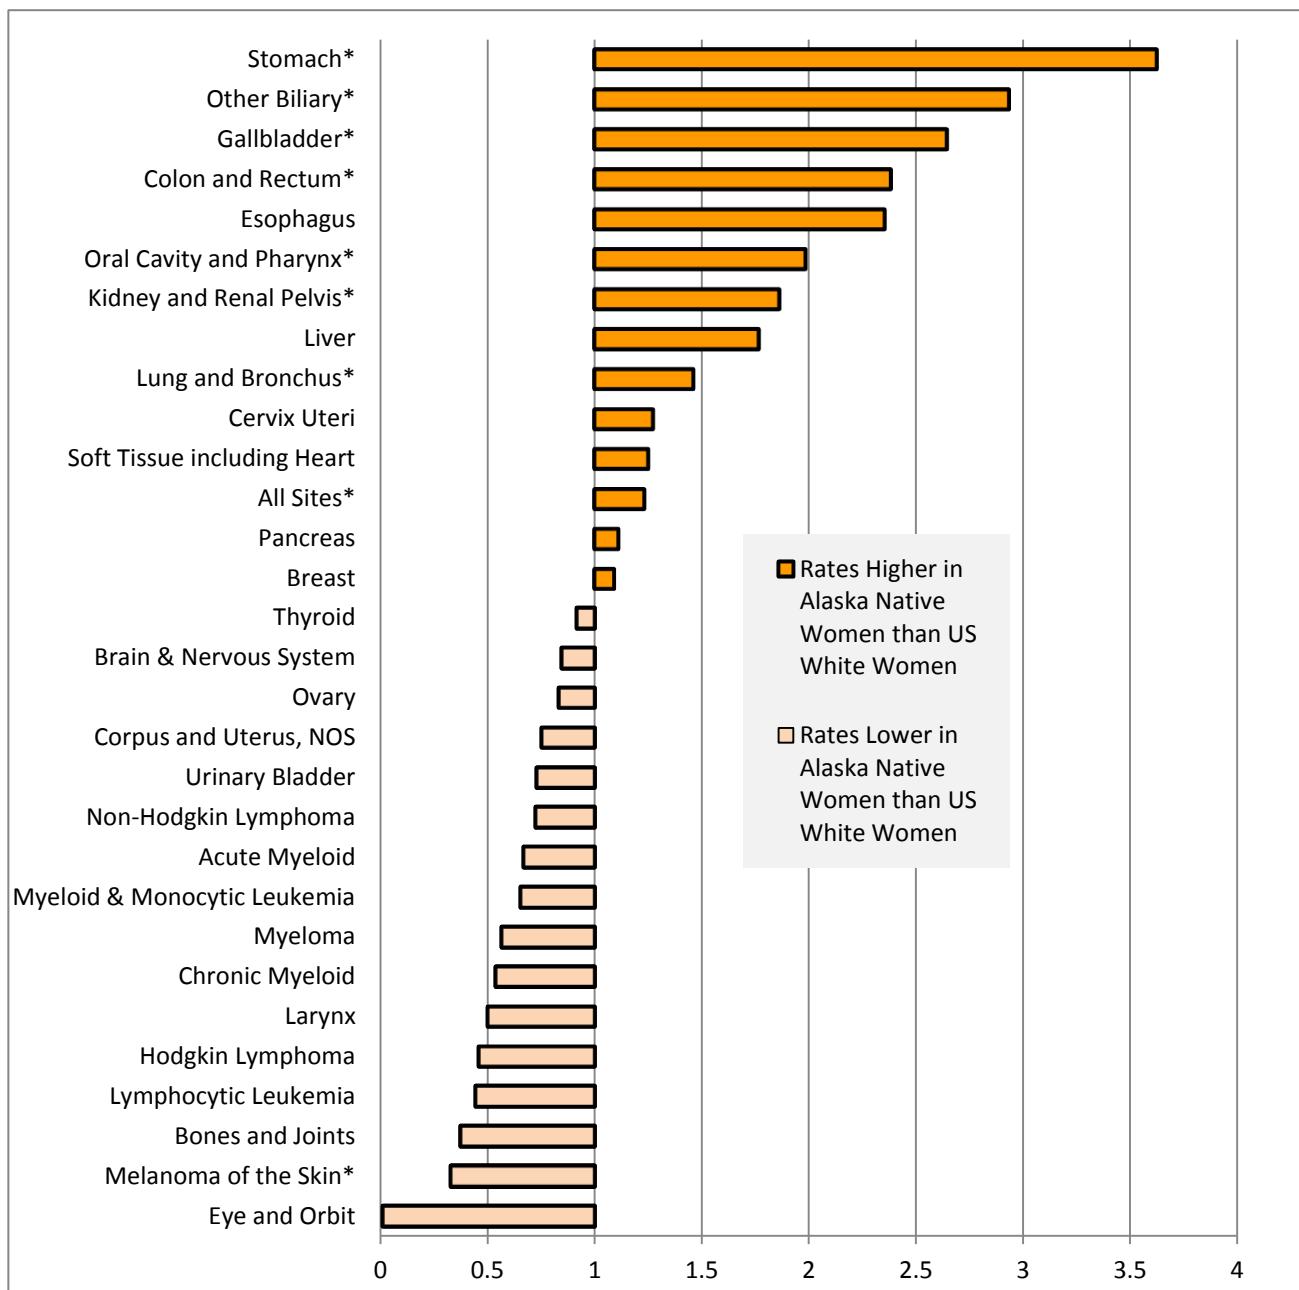

**Age-Adjusted Rate Ratios**  
**Alaska Native Men : US White Men**  
**2009-2013**

\* Rates among Alaska Native people are statistically different from US White rates;  $p < 0.05$ .

Rate ratio for nasopharynx = 16.33\* not shown, but included in oral cavity/pharynx group.

**Age-Adjusted Rate Ratios**  
**Alaska Native Women : US White Women**  
**2009-2013**

\* Rates among Alaska Native people are statistically different from US White rates;  $p < 0.05$ .

Rate ratio for nasopharynx = 22.5\* not shown, but included in oral cavity/pharynx group.

## Tribal Health Regions

The tribal health regions within this report are based upon census areas and boroughs. In general, these regions closely align with the Alaska Tribal Health Organizations' service areas. However, the regions used in this report do not include the exceptions noted on the following page.

# Tribal Health Regions

---

Tribal Health Region	Title I and V THOs in Region	Census Area/Borough included in Region	Exceptions to Census Areas/Boroughs	
			(villages in addition)	(villages removed)
Aleutians and Pribilofs	Aleutian Pribilof Islands Association (APIA), Eastern Aleutian Tribes Inc., St. George Traditional Council	Aleutians East Borough, Aleutians West Borough		
Anchorage/Mat-Su	Southcentral Foundation (SCF), Chickaloon Village, Native Village of Eklutna, Knik Tribal Council	Anchorage Municipality, Matanuska-Susitna Borough		
Arctic Slope	Arctic Slope Native Association (ASNA), Ukpigvik Inupiat Corporation	North Slope Borough		Point Hope (Northwest Arctic), Anaktuvak
Bristol Bay	Bristol Bay Area Health Corporation (BBAHC)	Dillingham, Lake and Peninsula Borough, Bristol Bay Borough	Goodnews Bay, Platinum	
Copper River/Prince William Sound	Chugachmiut Inc. (part)**, Chitina Traditional Council, Copper River Native Association (CRNA), Mt. Sanford Tribal Consortium, Valdez Native Tribe	Valdez/Cordova	Cantwell	
Interior	Tanana Chiefs Conference (TCC), Council of Athabascan Tribal Governments, Fairbanks Native Assoc., Tanana IRA Native Council	Denali Borough, Fairbanks North Star Borough, Southeast Fairbanks, Yukon-Koyukuk	Anaktuvak Pass	Cantwell (Copper River/Prince William Sound); Grayling, Anvik Shageluk, Holy Cross (Yukon-Kuskokwim)
Kenai Peninsula	Chugachmiut (part)**, Kenaitze Indian Tribe IRA, Ninilchik Traditional Council, Seldovia Village Tribe	Kenai Peninsula Borough		
Kodiak Area	Kodiak Area Native Assoc. (KANA), Native Village of Karluk	Kodiak Island Borough		
Northwest Arctic	Maniilaq Association	Northwest Arctic Borough	Point Hope	
Norton Sound	Norton Sound Health Corp. (NSHC), Native Village of Diomede	Nome		
Southeast	Southeast Alaska Regional Health Corp. (SEARHC), Hoonah Indian Association, Ketchikan Indian Corporation, Metlakatla Indian Community, Yakutat Tlingit Tribe	Yakutat Borough, Skagway-Hoonah-Angoon, Haines Borough, Juneau Borough, Sitka Borough, Wrangell-Petersburg, Prince of Wales/Outer Ketchikan, Ketchikan-Gateway Borough, Yakutat Borough		
Yukon-Kuskokwim	Akiachak Native Community, Native Village of Quinhagak, Yukon Kuskokwim Health Corp.	Bethel, Wade Hampton	Grayling, Anvik, Shageluk, Holy Cross	Goodnews Bay, Platinum (Bristol Bay)

\*\* Chugachmiut is separated into 2 regions: Chenega Bay, Tatitlek, Valdez and Cordova are included in Copper River/Prince William Sound; Port Graham, Nanwalek and Seward are included in Kenai Peninsula.

## **GLOSSARY OF CANCER TERMS**

**AGE-ADJUSTED RATES:** Rates have been mathematically weighted to allow comparisons of populations with different age distributions. Adjustment is usually made to a standard population. In this report the Census 2000 U.S. standard population is used.

**AGE-SPECIFIC RATES:** Rates are calculated using the number of cases occurring in a specified age group, divided by the population for that age group.

**AVERAGE ANNUAL RATE:** Cases for a given number of years are added together and divided by the numbers of years to give an average annual number. This number of cases is then divided by the population to determine the rate.

**BENIGN:** A growth which generally is not life threatening.

**BIOPSY:** The removal of a sample of tissue to be examined under a microscope to look for cancer cells.

**CANCER:** A harmful growth of cells that if allowed to keep growing will interfere with body function and eventually cause death. Cancer is also known as malignant neoplasm or malignant tumor.

**CARCINOGEN:** A cancer causing substance.

**CORPUS UTERI:** Body of the uterus, in contrast to the cervix.

**DYSPLASIA:** Abnormal development of cells which may precede the development of cancer.

**GENETIC:** Inherited; having to do with cell information passed from parents to children through DNA.

**HYPERPLASIA:** Abnormal growth of cells resulting in the increase in size of a tissue or organ. Hyperplasia may become cancerous.

**INCIDENCE:** New cases of a specific disease occurring in a specified time period, usually expressed as new cases per 100,000 persons per year.

**IN SITU:** The growth, tumor, cancer has not extended beyond the level of tissue in which it began.

**INVASIVE:** The growth extends beyond where it started, into other tissues and organs in the body.

**LEUKEMIAS:** Cancers of the organs that make the blood, bone marrow and lymph.

**LOCALIZED:** Cancer found only in the organ where the cancer started.

**MALIGNANT:** A tumor that is cancerous and has the ability to spread to other parts of the body.

**METASTASIS:** The spread of cancer from one part of the body to another part of the body.

**MORBIDITY:** Illness or disease.

**MORTALITY:** Numbers of deaths occurring in a certain time period usually expressed as number of deaths per 100,000 persons. Mortality data are based on death certificates.

**NEOPLASM:** Any growth, benign or malignant. A tumor.

**ONCOLOGIST:** A doctor who specializes in cancer treatment.

**POLYP:** A small, noncancerous growth in the mucous membrane, most commonly found in the colon.

**PRIMARY CANCER:** The organ of the body in which the cancer is thought to have started.

**RATE:** The number of occurrences of a disease in a population in a given time period.

**RATE RATIO:** Comparison of one rate with another to show how many times larger or smaller one is compared to the other. Generally the rate in the population of interest is compared with that of a standard population (for which data are available and published).

**RISK:** An individual's chance of developing cancer.

**RISK FACTORS:** Factors which increase an individual's chance of getting cancer. These may genetic, environmental, cultural or behavioral.

**SCREENING:** Tests or examinations done to detect cancer very early, before the person is aware of the cancer or before the person has symptoms.

**SEER (STATISTICS, EPIDEMIOLOGY AND END RESULTS):** A program sponsored by the National Cancer Institute designed to collect very detailed information on cancer occurrence, treatment and outcome in select states and regions in the U.S.

**SITE:** In the cancer field, site refers to a body organ.

**SITE-SPECIFIC RATE:** Rate or risk of developing cancer in a specific site (body organ).

**STAGE OF DISEASE:** The disease (cancer) is categorized by how far the disease has spread. Generally, the terms local, regional, or distant are used. More detailed staging systems are also available specific to the cancer site.

**SURVIVAL RATE:** The proportion of patients alive following diagnosis of cancer at a specific time period after diagnosis. Often expressed as the percent of patients alive after five years or the five year survival rate.

**TUMOR:** A general term used for a growth, malignant or benign.

**TUMOR REGISTRAR:** The person who collects and reports tumor registry information; those who have had special training and an examination to become a Certified Tumor Registrars (CTR).

**TUMOR REGISTRY:** A standard system of collecting information on patients with cancer. Benign tumors are usually not entered into the registry.
