Years of Potential Life Lost

2023 Alaska Native Health Fact Sheet | Mortality

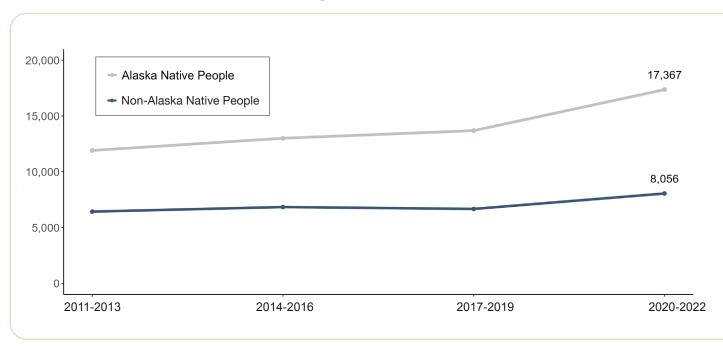

Definition

Years of potential life lost (YPLL) measures premature mortality. It represents the total number of years not lived by persons who died before the age of 75 years. YPLL is an alternative measure of mortality that places more emphasis on deaths that occur at younger ages. The leading causes of YPLL are the leading causes of death ranked according to those that accounted for the highest number of YPLL.

Summary

- » Alaska Native people experienced significantly higher YPLL rates as compared to non-Alaska Native rates in all time periods.
- » From 2017 to 2022, the leading causes of YPLL among Alaska Native people, in rank order, were unintentional injuries, suicide, heart disease, and cancer. Unintentional injuries accounted for more than a quarter (27.1%) of all YPLL for Alaska Native people.
- » COVID-19 was the 6th leading cause of YPLL for Alaska Native people statewide from 2020-2022, accounting for 5.2% of all YPLL.
