

Leading Causes of Death

2023 Alaska Native Health Fact Sheet | Mortality

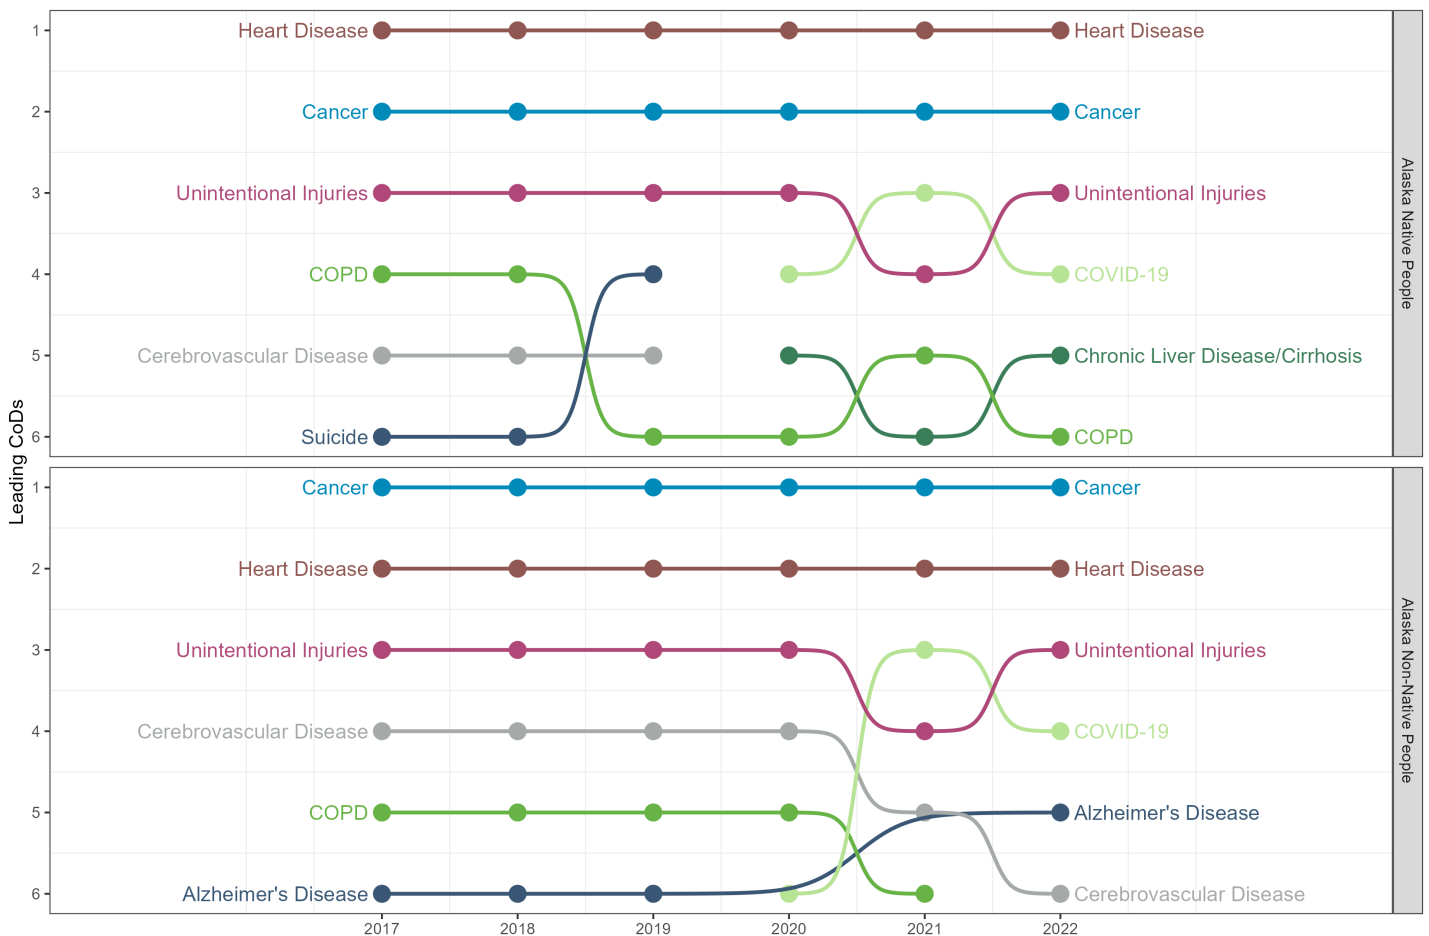

Definition

The leading causes of death are the underlying causes of death that account for the highest number of all deaths in a population in a given time period. The leading causes of death are presented in rank order and are ranked according to the age-adjusted mortality rate. Ranking the leading causes of death is a common way to look at mortality data and to monitor the burden of various diseases and behaviors. For the International Classification of Diseases-10 (ICD-10) code categorization, visit the [National Center for Health Statistics](https://www.cdc.gov/nchs/data/icd/icd10cm.htm).

Note about chart and tables

- » The chart on the previous page is a type of line chart called a bump plot which displays how rank changes over time. The Y-axis shows a cause of death's rank from the 1st leading cause of death to the 6th leading cause of death. The X-axis shows the years 2017-2022. By tracking the lines, you can see how a specific cause of death moves up or down in rank over time.
- » The tables below show the top ten leading causes of death by sex for Alaska Native People and non-Alaska Native people statewide.

Age-Adjusted Leading Causes of Death in Alaska, 2017-2022: Alaska Native People and Non-Alaska Native People

Data Source: State of Alaska Vital Statistics. | Note: Leading causes of death based upon rates age-adjusted to the 2000 U.S. standard population.

Leading Causes of Death

2023 Alaska Native Health Fact Sheet | Mortality

Summary

- » From 2017-2022 heart disease and cancer remained the first and second leading causes of death for Alaska Native people statewide. These two causes of death accounted for 36.2% of all deaths of Alaska Native people during this time period.
- » The Alaska Native mortality rates were significantly higher than the non-Alaska Native rates for the six leading causes of death.
- » In 2021, COVID-19 temporarily surpassed unintentional injuries as the third leading cause of death.
- » For 2021, the [CDC lists heart disease as the leading cause of death in the United States](#) and [Cancer as the leading cause of death for Alaska](#).
